

SHEDDING

THE C-19 JAB IS CONTAGIOUS TO THE UNVAXXED. ("SHEDDING ")

a.) **Pfizer officially admits** in their documents that the experimental mRNA (*gene-altering shots*) are **SUPER Spreaders** that transmit disease to the **unvaxxed**. During Pfizer's clinical trials, it's termed "occupational exposure."

b.) **Self-Spreading Vaccines** Johns Hopkins University Center for Health Security, page 45

"The most practical and useful application of self-spreading vaccines would be to control disease spread in wild animal populations (also known as sylvatic spread). A vaccine would be administered to a few selected animals in hotspots among target populations, including nonhuman primates, bats, or rodents. The vaccine would then spread within the target population, eliminating the need to vaccinate each animal. Successful disease control in animal populations could limit the number" ... "In the event of a grave public health threat, self-spreading vaccines could potentially be used to broadly inoculate human populations. Like the approach in animals, only a small number of vaccinated individuals would be required in order to confer protection to a larger susceptible population, thus eliminating the need for mass vaccination" ...

c.) Dr. Baker - **stay away from the vaccinated** - this is the 2021 version of leprosy:

"Messes up your menstrual cycle, causing blood clots, and stops your reproductive system...It's a Population reduction shot": <https://www.bitchute.com/video/wt2iltMVuPTK/>

d.) Dr. Larry Pavelskey explains the truth about what is happening with the *gene-altering* shot. He exposes and explains in very simple to understand terms the complete details of how this *gene-altering* shot works. ...

"People around the injected people who have not been injected, are getting the symptoms of Covid, in addition to miscarriages, bleeding, irregular menstrual cycles...[the shot] cause[s] the body to make an

antibody against the male and female **reproductive systems** because those proteins in the **male and female reproductive systems had similar instructions** to the spike protein. ...So what we're seeing in women who get the injection is a very large, hundreds-of-percent **increase (500% – 600%) in miscarriages and stillbirths** of their babies, all being reported to the Vaccine Adverse Event Reporting System (VAERS). "what we are seeing is women who are around others who've been injected have the same experience"... Hit the link: then scroll down until you see this: time code 9:45

e.) Sadly, on this one, I have personal knowledge of my family member who was with her friend who had received the shot. Shortly after, my family member (age 14) started having **THREE** monthly periods. The Shedding then hit her mom, who was pregnant at the time. Shortly after, she had a **miscarriage**, just as many did in the Dr. Pavelskey and Dr. Baker clips above.

It may sound like the plot of a science fiction movie, but U.S. National Institutes of Health (NIH)-funded scientists have been secretly working on genetically-engineered live virus vaccines, which they refer to as "contagious" vaccines, that can **transmit vaccine strain viruses through a population on their own**. The vaccines are so contagious that only five percent of the population would need to receive the shot, while the other 95 percent would be passively vaccinated through vaccine strain infection, shedding, and transmission.

[Our research indicated a portion of the shot could spread to an unvaxxed within the first **ten days** of being near someone who had received the shot. **However, there is no time limit if there's bodily fluid transmitted from a vaxxed to an unvaxxed.**]

A "contagious" vaccine would spread swiftly as people come in close contact with **body fluids** of a recently vaccinated person, such as saliva or nasal secretions, like when a person sneezes or coughs, inhales droplets or kisses someone infected with a cold or influenza virus.¹ Spurred by the COVID-19 pandemic.

NoVaxaDate.com was created for people who want to enjoy life as it used to be. Free of genetic altering shedding.

If you know someone who received the shot, they may be able to detox part of it out. Below is the information we've found on this subject.

ICU Intubated Covid Patients

Healed Within Hours When Treated with Glutathione and **NAC**.

Example from Dr. Ricardo Delgado

*"We have seen clinical trials with hundreds of patients in the ICU, on a respirator and intubated, practically on the verge of death. With bilateral pneumonia caused by the spread of graphene oxide and subsequent 5G radiation in the lung plaques. Well, this diffuse stain in these patients is symmetrical, which would not happen with a biological agent since it would be rather asymmetrical, for example, when there is a pneumococcal infection, right? In that case, a diffuse stain usually appears in one part of the lung, but not in another, not in both symmetrically. When treated with glutathione via direct intravenous—or even orally as well—or with N-acetylcysteine (**NAC**) 600 mg or higher doses, people within hours began to recover their oxygen saturation."*

Combined with **Zinc**, **NAC** is an essential antioxidant used to degrade graphene oxide. Dr. Ricardo Delgado says he has personally helped people affected by magnetism after vaccination with these two antioxidants. This is in people with two doses of the **Pfizer jab** or **Moderna** who have become magnetic; **after these supplements**, they no longer have this symptom.

- **N-acetylcysteine (NAC)** 600 to 900mg per day & **Zinc** 30 to 50mg. per day.

You can acquire this from your local vitamin store.

A study published in PubMed reveals that biocompatible NAC reduces Graphene Oxide,

<https://pubmed.ncbi.nlm.nih.gov/30892320/> also: <https://www.bitchute.com/video/aAFq0v6lpKbK/>

- **Ivermectin** (safer than Tylenol) **destroys** parasites, Graphene Oxide, and Graphene hydroxide **from causing 1,000 razor-type blade cuts in your veins, which become blood clots.**

Explained in time code 100: <https://www.bitchute.com/video/uVMK12npr52D/>
